

Wicket Gates

Wicket gates are manufactured from quality material and are available both left and right handing. Frames and hinges are fully welded, and are supplied complete ready to install. All our gates are finished in silver paint, unless specified, and include a quality night latch complete with spare keys.

Outside opening gates, are designed to allow the gate and the outer frame to open outwards. This type is predominantly used when the shutter is fixed to the outside of the building.

The Emergency exit range includes a panic latch or push pad option and can be supplied with an outside access device. This type is particularly useful when a fire exit is required and the only option is a shutter door. Outside locking devices can be fitted to enable external access, but retain the emergency exit override.
